1 A problem from the notes

Select and solve one problem among the ones at the end of Chapter 12 of Siegmund & Yakir "The statistics of gene mapping."

2 One critical reading

There are three papers (or group of papers) that you can choose from this week, all of them linked from the class web-site.

1. LMM: Zhou and Stephens (2013)

Choose one and write a short report, which includes a summary of a contribution, a discussion of what you think are (a) really attractive features and (b) limitation of the methods as well as an outline of what are the next steps you might want to take.
